# CuraForm is a purpose-built solution

Curaform is the benchmark in healthcare furniture, purpose-built for community and patient spaces.

Healthcare environments require purpose-built furniture solutions that respond to the unique requirements of people in care and those who care for them. The CuraForm series is a modular solution that quickly becomes familiar to patients and caregivers, enhancing staff satisfaction and ensuring a safer working environment.

The CuraForm split back chair features a smart fold down upper back, allowing the caregiver to safely access the occupant. The upper back is tethered to the interior metal frame for security and stability.

---

# Repairable, replaceable and reconfigurable

CuraForm is designed to be put together and taken apart as needed, allowing for on-site maintenance, replacement and reconfiguration of all components.

Metal-to-metal hardware connections provide integral structure and strength, accommodating up to 500 lbs. of active weight capacity. CuraForm's durability eliminates the broken product graveyard.

---

# Infection control

For the good of everyone's health, CuraForm's design provides a full and easily accessible 360° clean out. CuraForm finishes are constantly tested against the latest hospital grade disinfectants and cleaners for integrity and longevity.

Additional information can be found on the Cubicles.com [website](https://www.cubicles.com).

# Better housekeeping

Optional urethane armcaps provide a non-porous, durable surface that withstands hospital grade disinfectants and cleaners.

The metal mesh seat suspension provides superior support, and the best response for patient incontinence with no catch points for fluid or residue.

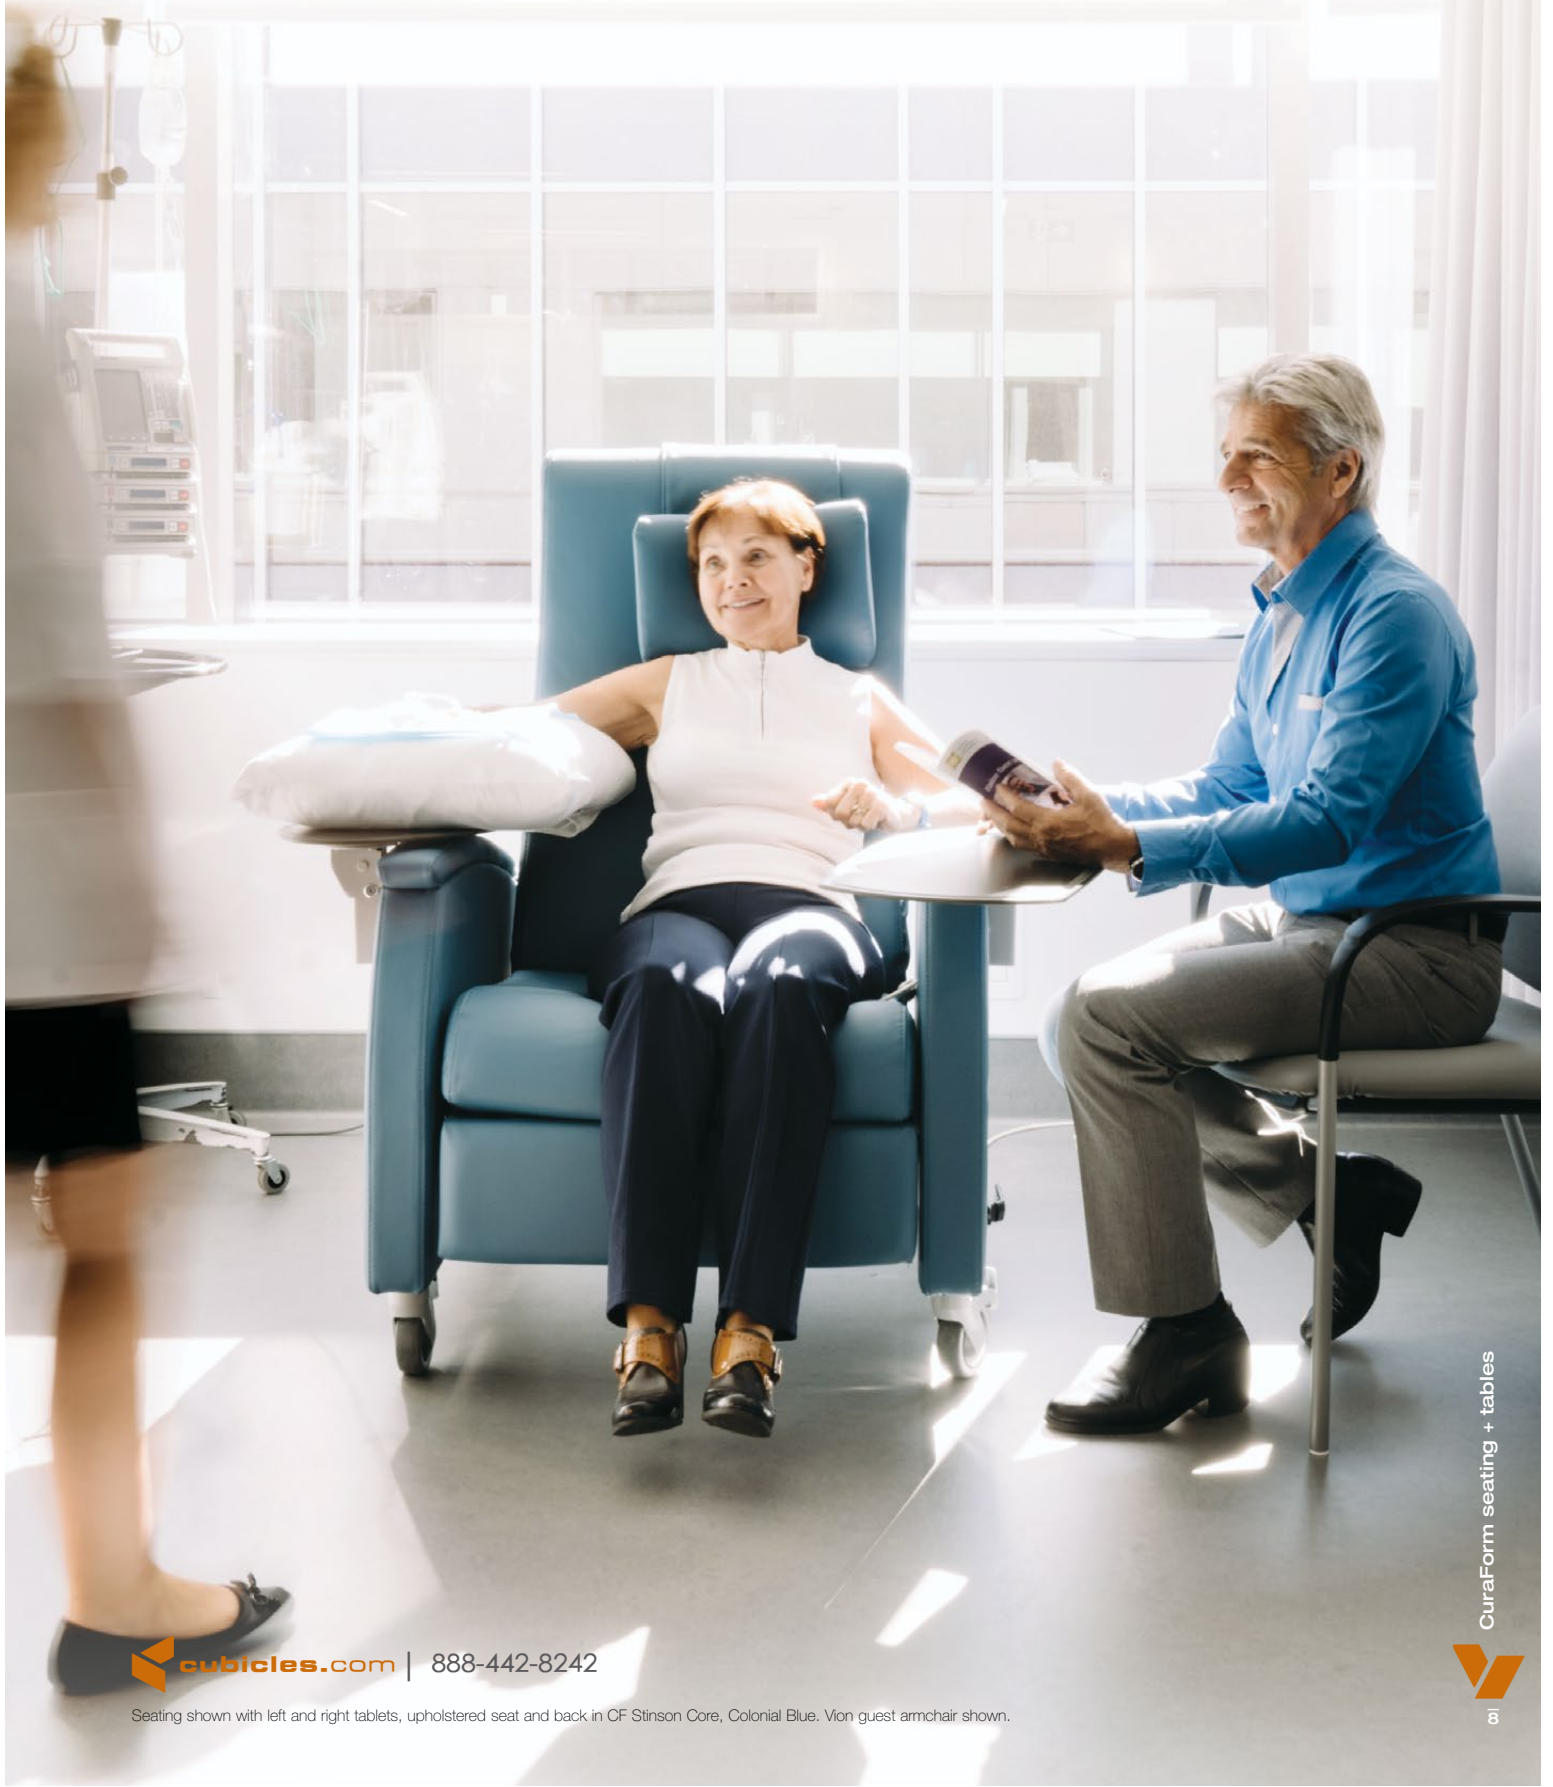

# Recline, effortlessly

Upright 30° / 762mm

Full recline 69<sup>3</sup>/<sub>4</sub>° / 1772mm

Better by design. CuraForm motion recliners follow the patient's intuitive response to reach for the arms when moving to a seated position. Additional ergonomic considerations include grip assist arms, built-in lumbar support, high density foam cushioning and waterfall edge seats to maintain circulation.

# A comfortable wait time for everyone

Improve the waiting experience with a customized solution. Adaptable to any size or type of space, CuraForm is available in wood or metal frames, freestanding or modular linking configurations, three back heights, standard and bariatric care widths, open or closed arms and with or without center legs.

Additional information can be found on the Cubicles.com [website](https://www.cubicles.com).

You'll be fine

Rear wall saver legs reduce wear and tear on walls.

---

# Supporting patient needs

CuraForm patient seating features an ergonomically contoured back and built-in lumbar support. A flex back option provides increased comfort. Tip and move casters can be specified on CuraForm HT models.

# Enhanced safety

A safer solution. Hip chairs take full advantage of CuraForm's superior engineering and construction, including a higher seat, a step rail and a wider seat width. Grip assist arms help with getting in and out of the chair safely.

## Care for the whole family

CuraForm sleepers are perfect for extended visits and transition easily from a lounge chair to a sleeper with an integrated storage box for blankets, pillows and other personal items. Double seat models recline independently for added flexibility.

Additional information can be found on the Cubicles.com [website](https://www.cubicles.com).

# An easy transition

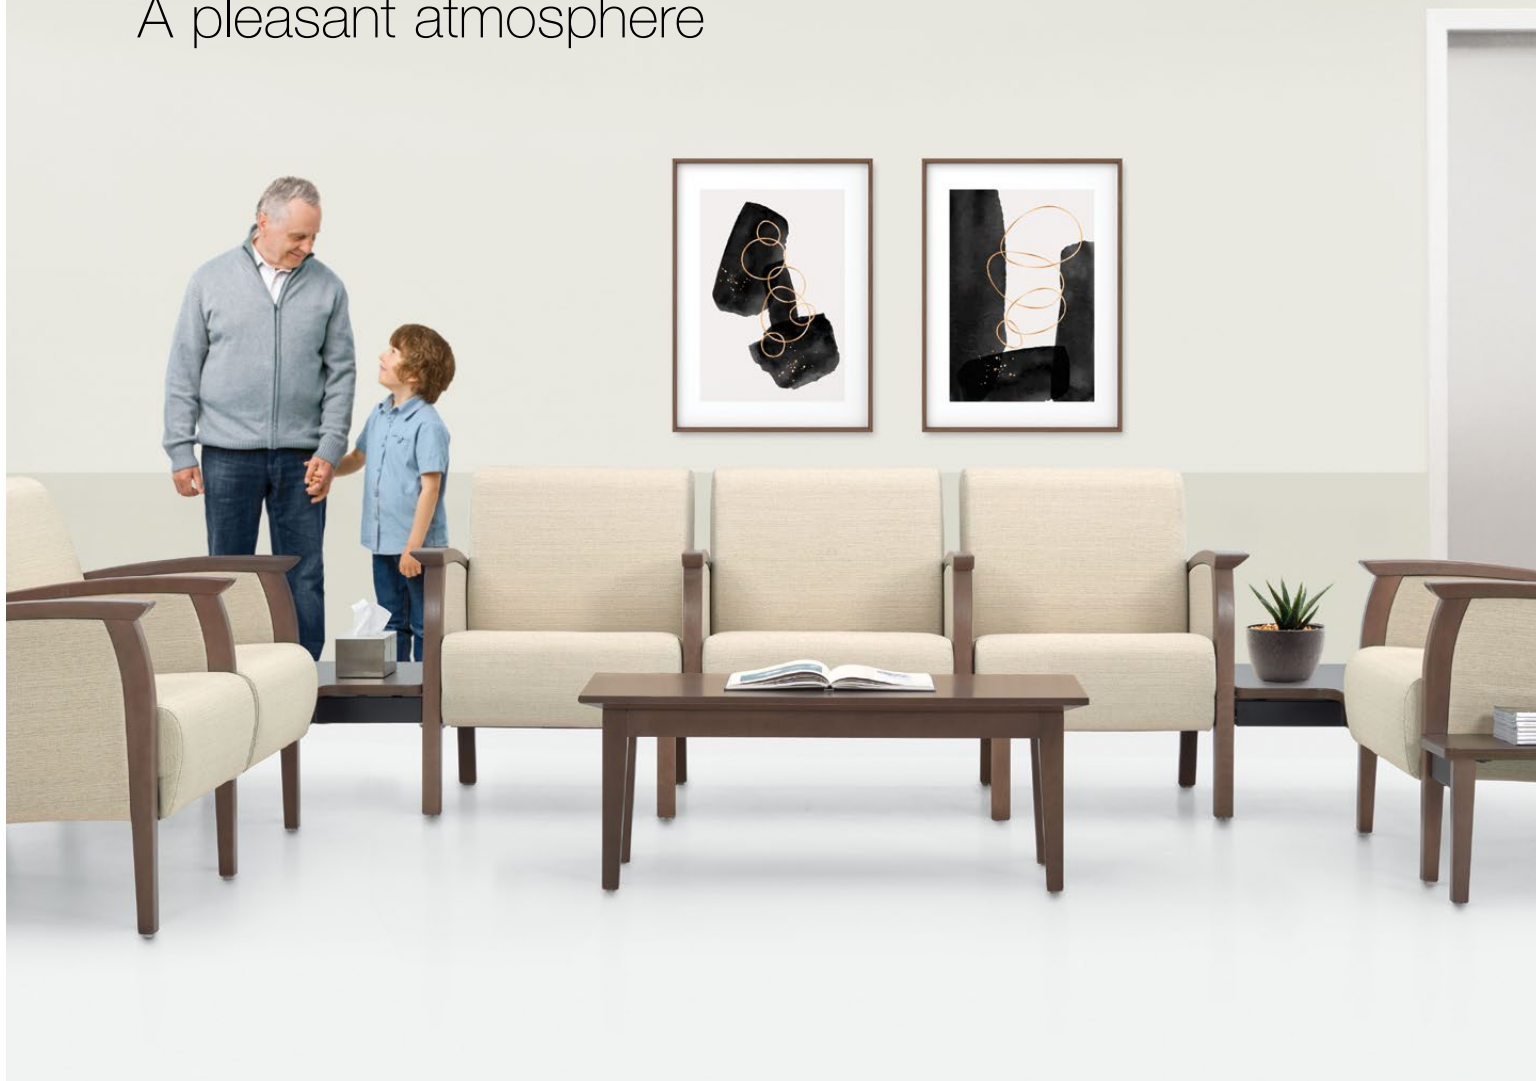

# Modular design

CuraForm modular seating ensures perfect configurations for unique architectural layouts and occupancy requirements, providing a comprehensive one spec solution for healthcare design.

The series includes coordinating linking and standalone tables built with the same durable construction, available in various sizes and finishes.

# A pleasant atmosphere

CuraForm lounge seating creates a warm and welcoming environment in healthcare spaces. A contoured back with built-in lumbar support and high density Ultracell foam cushions provide comfort for long or short wait times. Tables and seating feature optional integrated power/USB modules, allowing visitors to stay connected.
